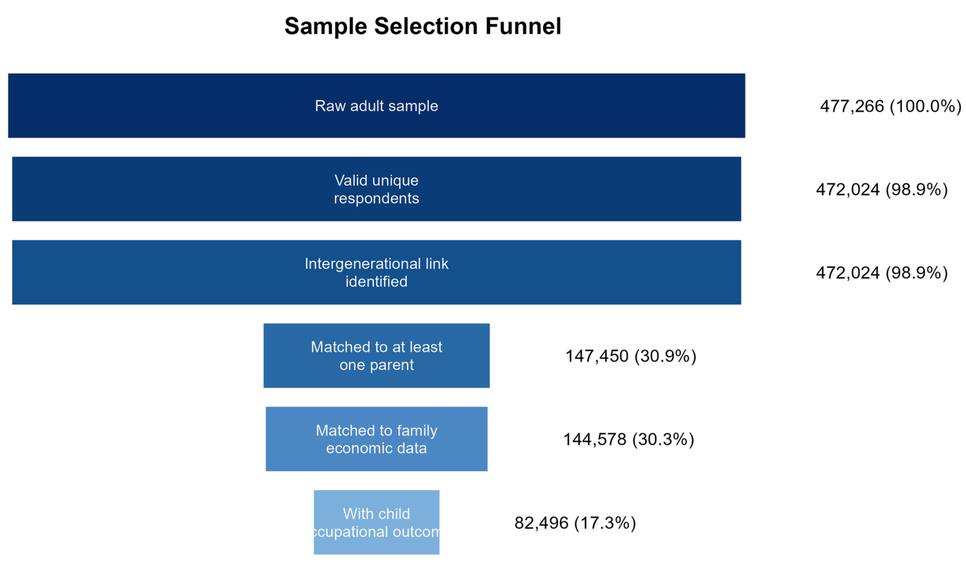
HOW DO PARENTAL SOCIOECONOMIC RESOURCES SHAPE CHILDREN'S OCCUPATIONAL OUTCOMES? A QUANTILE-BASED ANALYSIS USING CFPS (2010–2022)

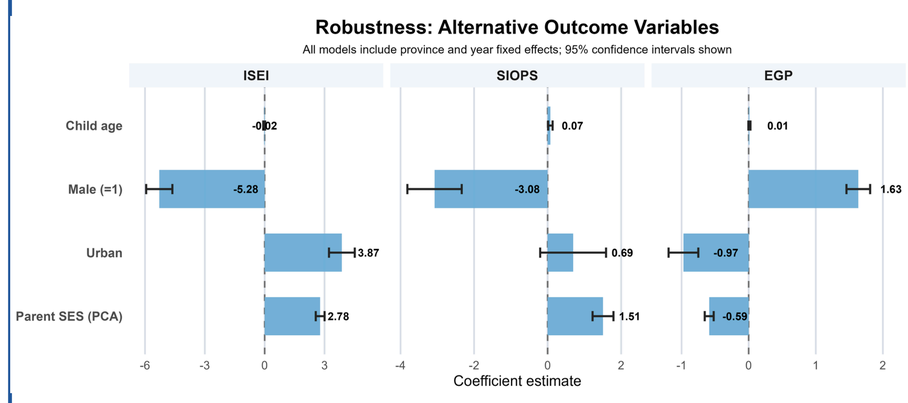
Supervised by Satoshi Araki
Written by Shi Haiyun, Jiang Yunzhi, Yang Yaru and Huang Chao

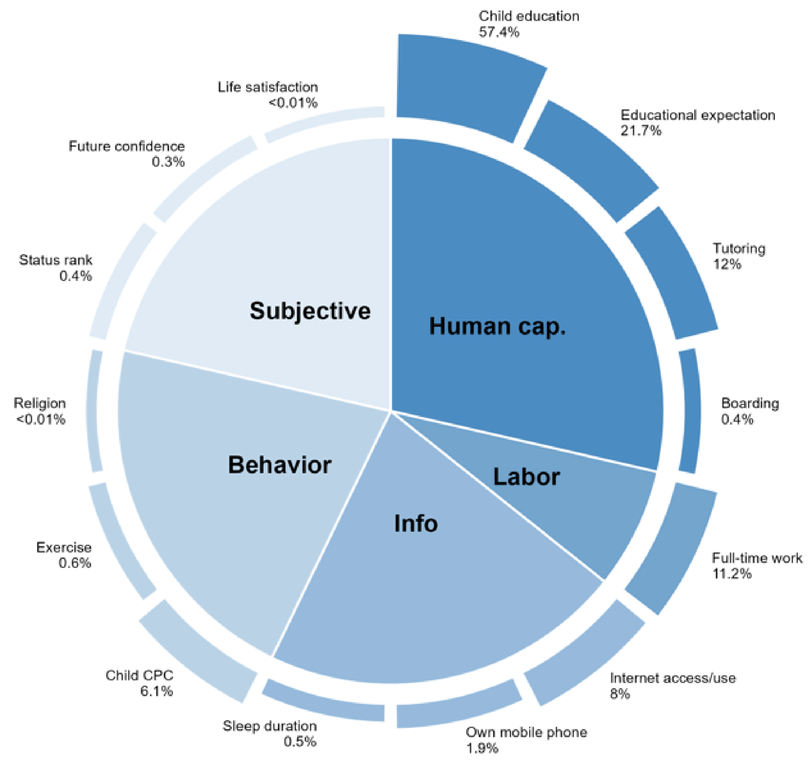
Research Question

- Do children from higher-SES families achieve better occupational outcomes?
- Is the intergenerational association stronger at the top or bottom of the outcome distribution?
- What mechanisms transmit parental advantage to children?

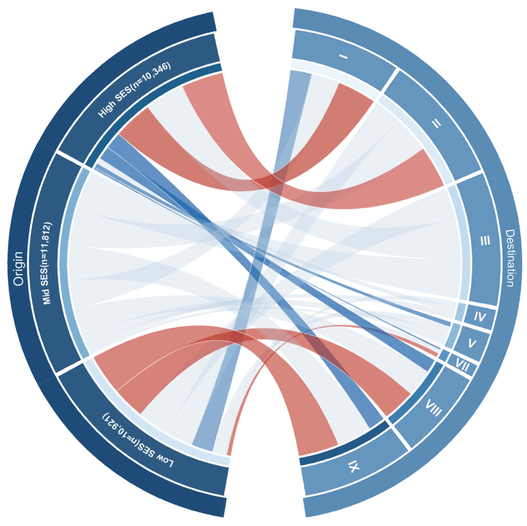


Mechanism





Key Finding



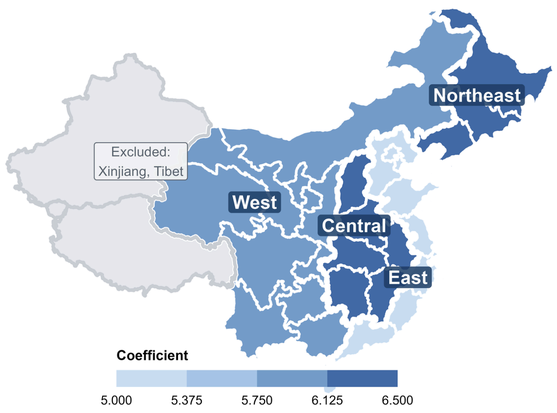
EGP destination classes

I	Higher service	17.0%
II	Lower service	20.3%
III	Routine clerical/sales	21.2%
IV	Small employer	3.3%
V	Independent	4.6%
VI	Manual foreman	0.0%
VII	Skilled manual	1.9%
VIII	Semi-unskilled manual	14.1%
IX	Farmers/Farm managers	17.7%

Observed > expected
Observed < expected
Close to expected

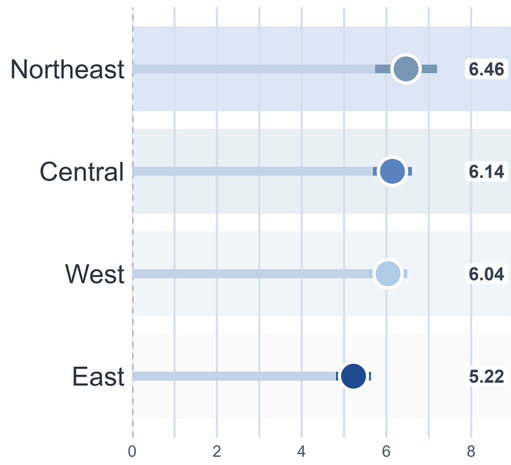
Regional Heterogeneity

Stepped spatial pattern in intergenerational transmission



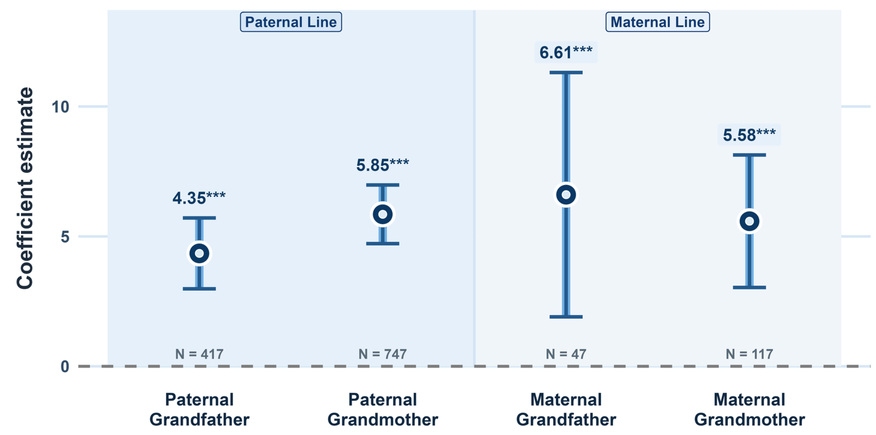
Estimated Coefficients

Effect of parental SES on child ISEI



Grandparent-specific Effects on Child ISEI

Coefficient estimates with 95% confidence intervals



Conclusion & Reference

- Occupational advantage is persistently transmitted across generations in China.
