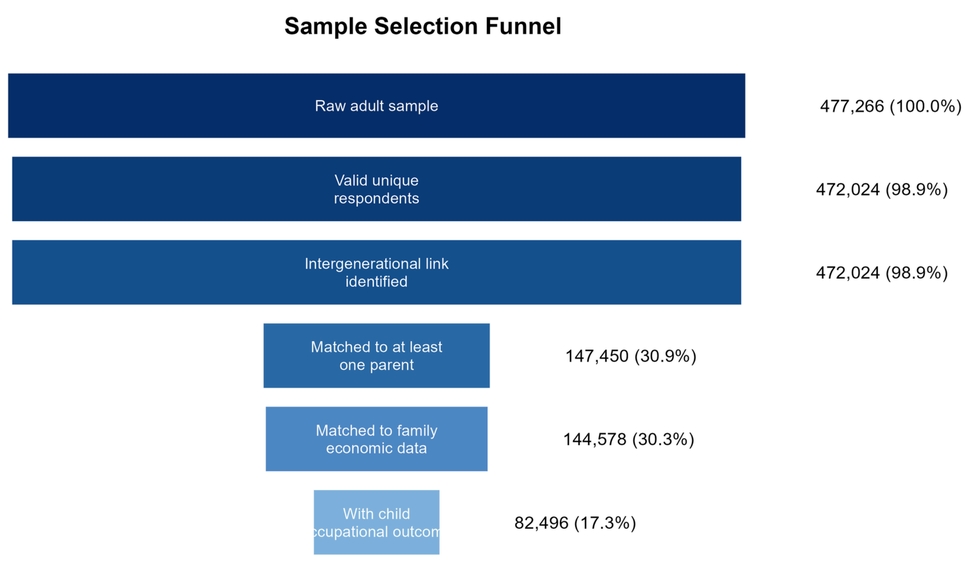
HOW DO PARENTAL SOCIOECONOMIC RESOURCES SHAPE CHILDREN'S OCCUPATIONAL OUTCOMES? A QUANTILE-BASED ANALYSIS USING CFPS (2010–2022)

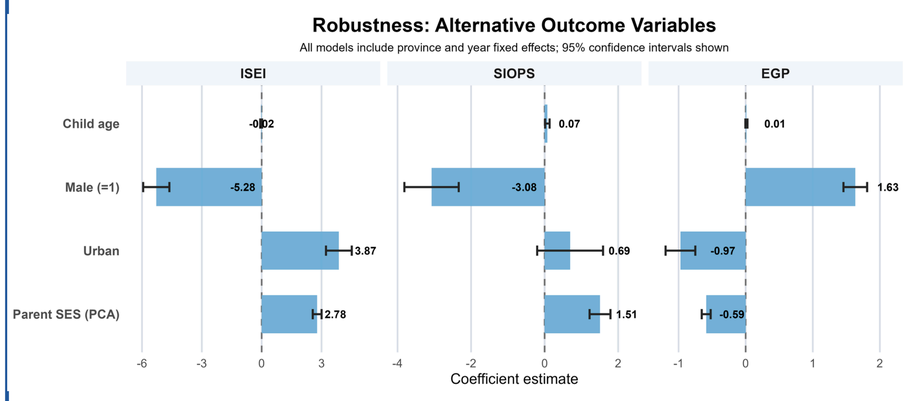
Supervised by Satoshi Araki
Written by Shi Haiyun, Jiang Yunzhi, Yang Yaru and Huang Chao

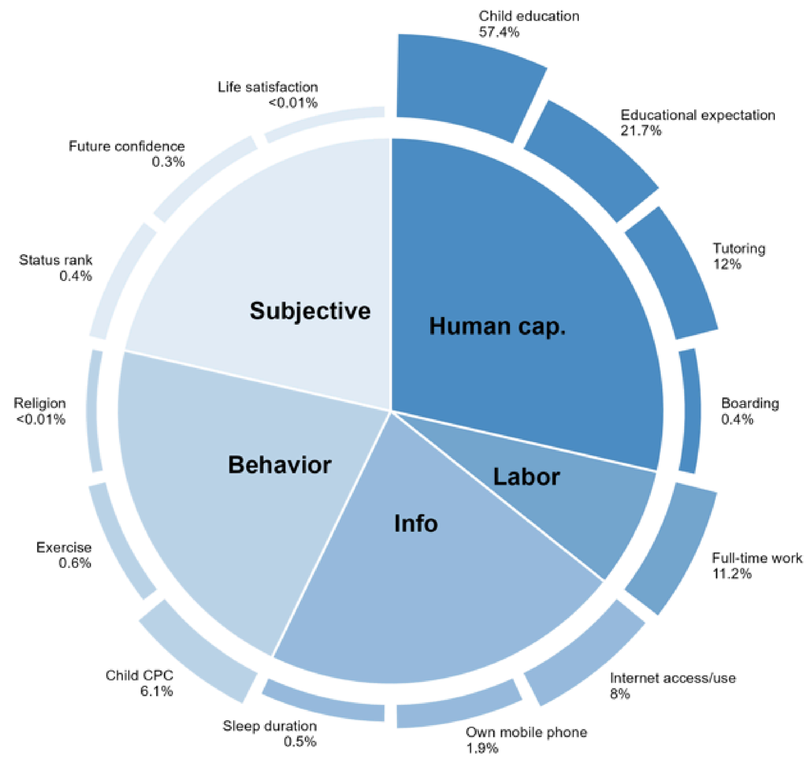
Research Question

- Do children from higher-SES families achieve better occupational outcomes?
- Is the intergenerational association stronger at the top or bottom of the outcome distribution?
- What mechanisms transmit parental advantage to children?

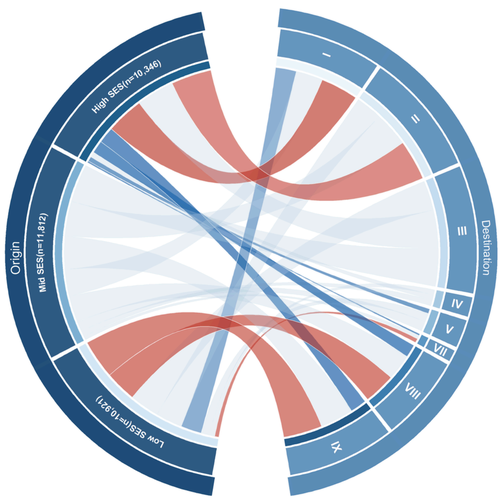


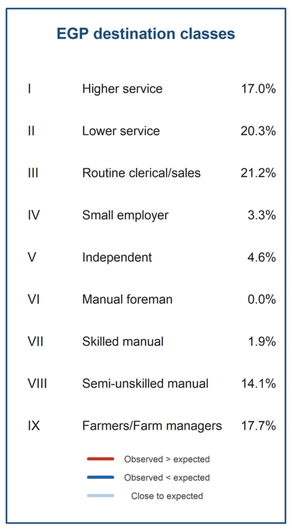
Mechanism





Key Finding





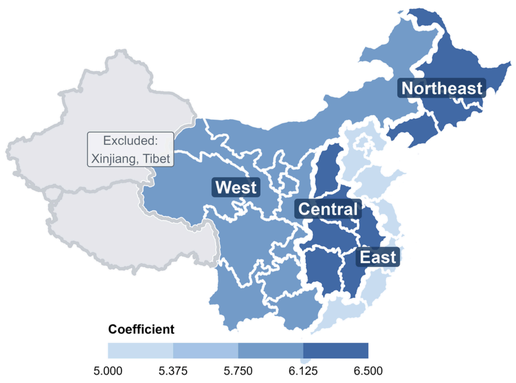
EGP destination classes

I	Higher service	17.0%
II	Lower service	20.3%
III	Routine clerical/sales	21.2%
IV	Small employer	3.3%
V	Independent	4.6%
VI	Manual foreman	0.0%
VII	Skilled manual	1.9%
VIII	Semi-unskilled manual	14.1%
IX	Farmers/Farm managers	17.7%

Observed > expected
Observed < expected
Close to expected

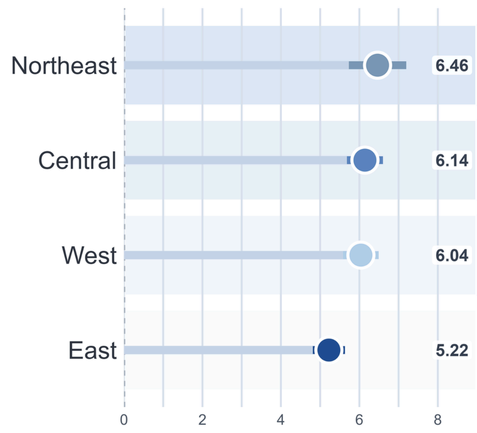
Regional Heterogeneity

Stepped spatial pattern in intergenerational transmission



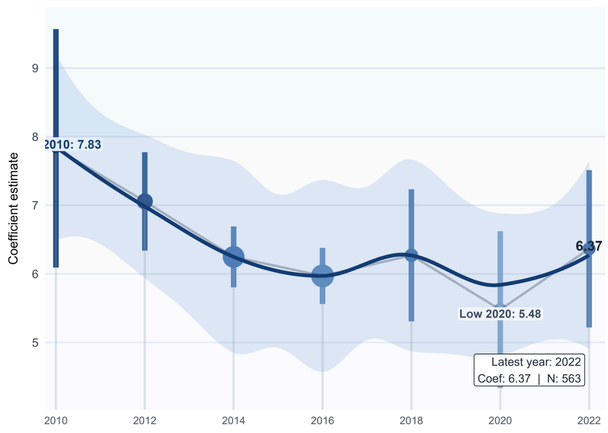
Estimated Coefficients

Effect of parental SES on child ISEI



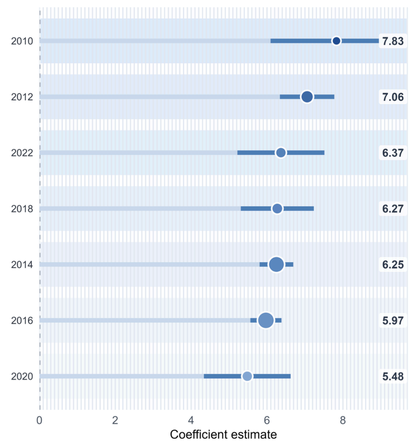
Yearly Dynamics

Smoothed trajectory with yearly CI



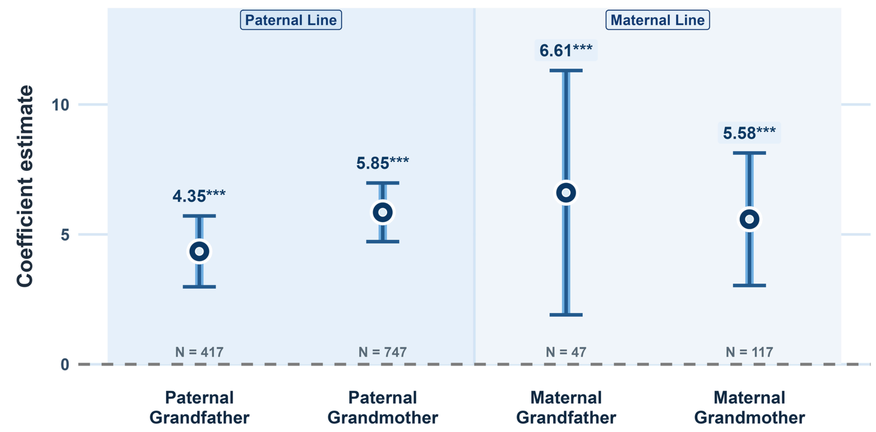
Year Ranking Card

Coefficient size by year



Grandparent-specific Effects on Child ISEI

Coefficient estimates with 95% confidence intervals



Conclusion & Reference

- Occupational advantage is persistently transmitted across generations in China.
