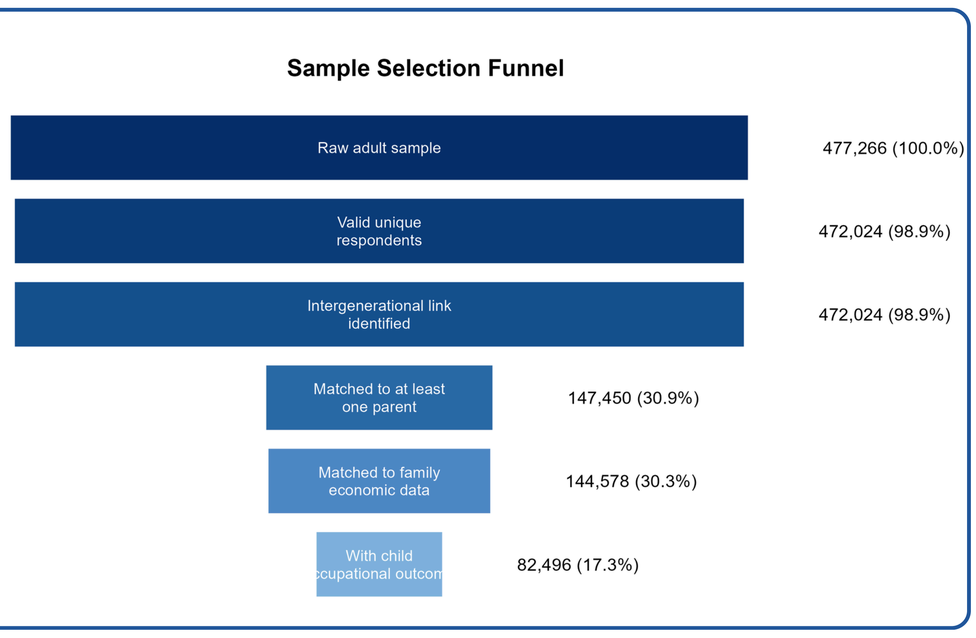
HOW DO PARENTAL SOCIOECONOMIC RESOURCES SHAPE CHILDREN'S OCCUPATIONAL OUTCOMES? A QUANTILE-BASED ANALYSIS USING CFPS (2010–2022)

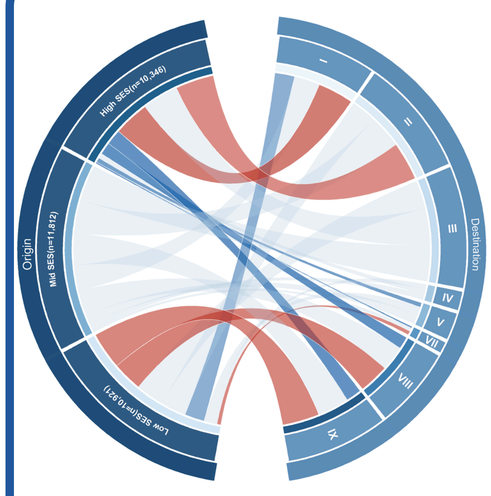
Supervised by Satoshi Araki
Written by Shi Haiyun, Jiang Yunzhi, Yang Yaru and Huang Chao

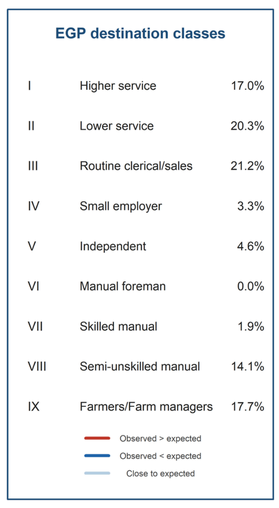
Research Question

- **Does** parental SES improve children's occupation?
- Does the effect vary by **region and over time**?
- What **mechanisms** drive the transmission?



Key Finding



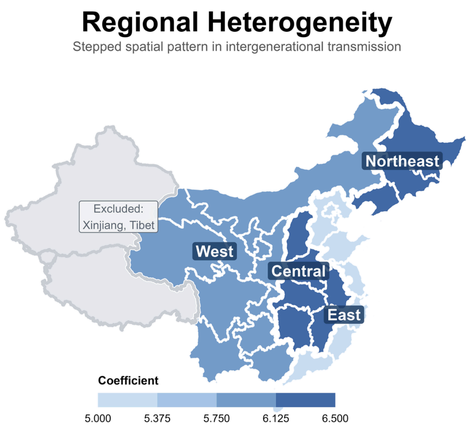


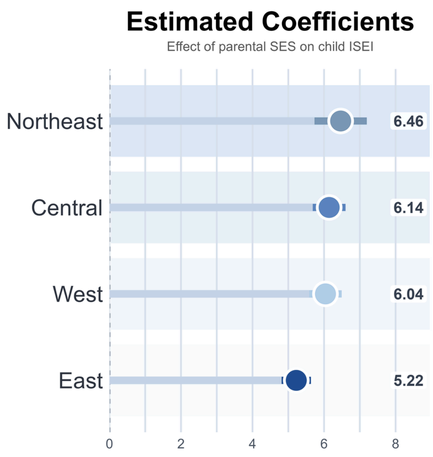
EGP destination classes

I	Higher service	17.0%
II	Lower service	20.3%
III	Routine clerical/sales	21.2%
IV	Small employer	3.3%
V	Independent	4.6%
VI	Manual foreman	0.0%
VII	Skilled manual	1.9%
VIII	Semi-unskilled manual	14.1%
IX	Farmers/Farm managers	17.7%

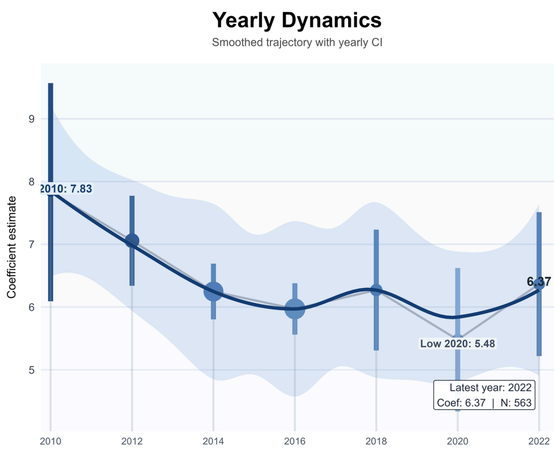
Observed > expected
Observed < expected
Close to expected

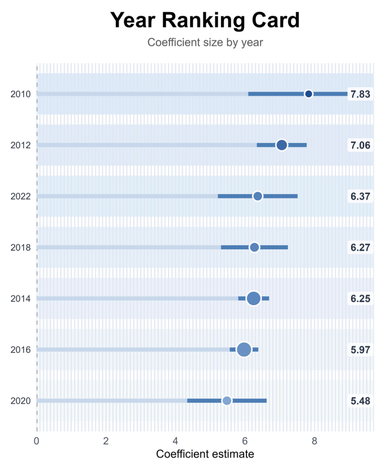
RQ1: Positive Effect
The magnitude of this effect varies.





RQ2: Regional Effect
Developed regions exhibit stronger.

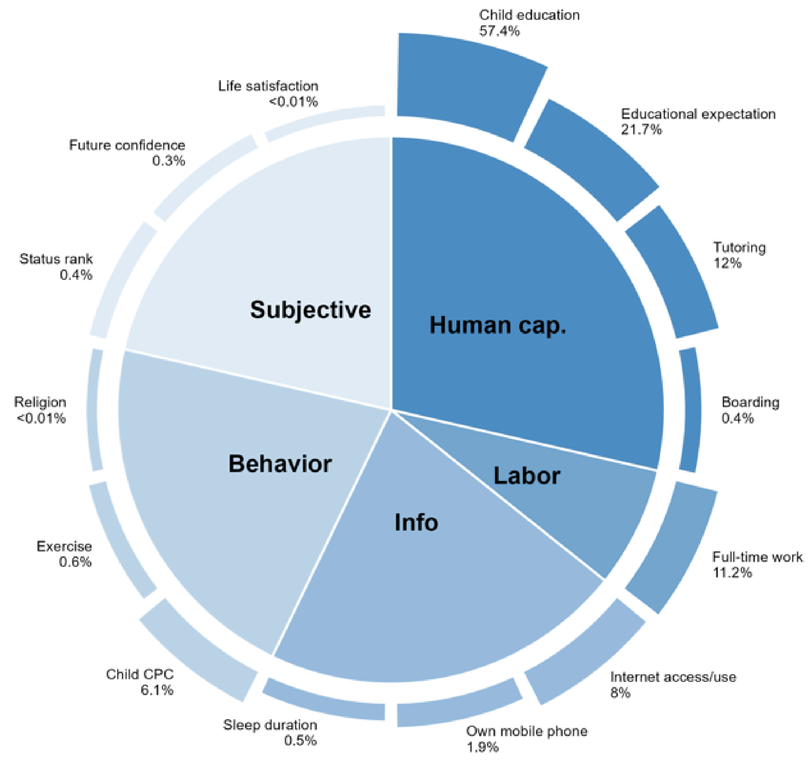




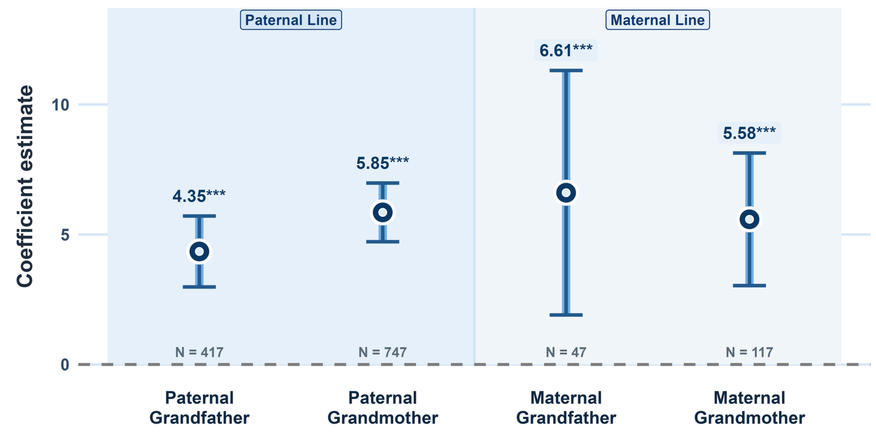
RQ3: Temporal Effect
Institutional and economic transitions change yearly.

Mechanism

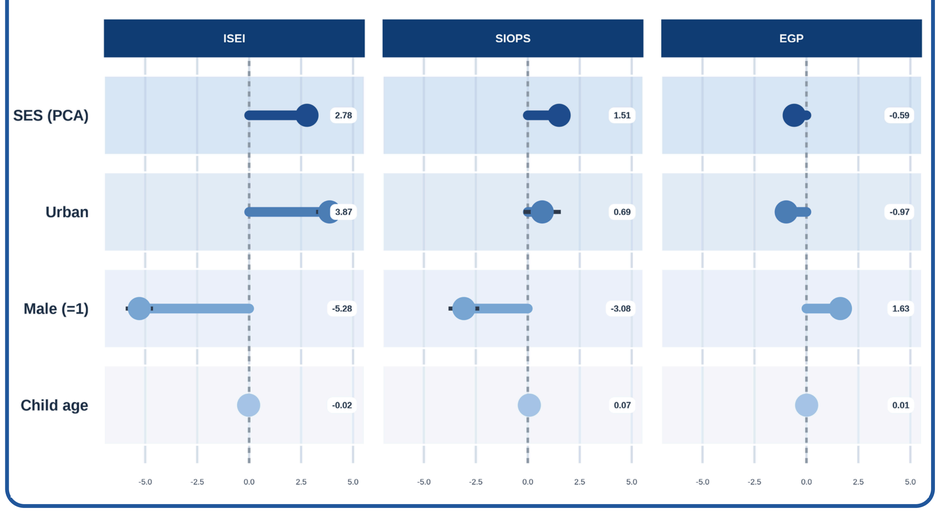
- **Mechanism: Human Capital Channel** has the largest transmission effect.



- **Further Study:** Grandparental SES also matters, but **less** than parental SES.



- **Robustness:** Results remain **consistent**.



Conclusion & Reference

- Parental SES **significantly** shapes children's occupational outcomes.
- **Human capital** is the main transmission channel.
- Effects vary by **region and time**.
